

Perfect 10 — LoyalBook

Full Flow Coverage & Security Verification

Every page, both roles (public · customer · admin) · 29 screens
Captured 8 July 2026 against a live local build after the security-hardening pass.

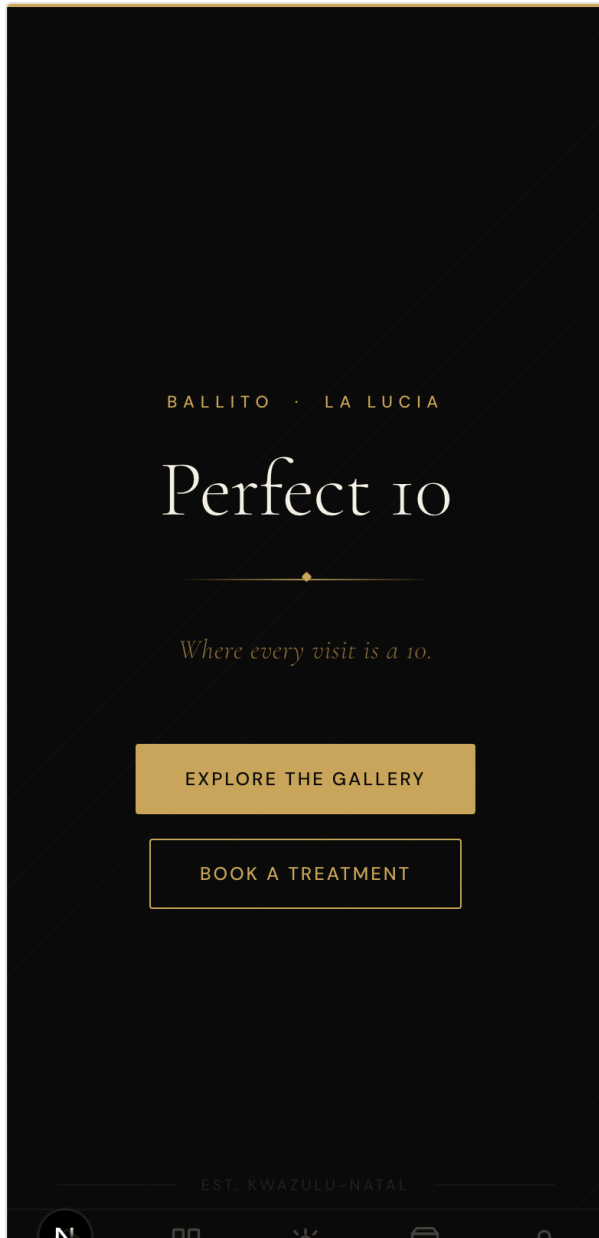

Security fixes verified in this build

ID	Issue	Fix	Test
C1	Any logged-in user could mark appointments complete and mint points repeatedly	updateStatus is admin-only; crediting is idempotent (one 'earned' txn per appointment)	PASS
C2	Client-supplied pointsRedeemed refunded on cancel → free points	Field removed from booking; refund branch deleted	PASS
H1–H3	Any client could read the whole customer base, analytics, and all bookings (IDOR/PII)	clients.*, analytics.*, appointments.list* moved to admin; added self-only clients.me / myAppointments / cancelMine	PASS
M1	Voucher redemption race → negative balance / over-redemption	Atomic conditional decrement inside the transaction	PASS
M2	Admin mutations trusted client-supplied tenant id	Server-derived spald/locationId preferred; cross-location writes blocked	code
M3	Public OTP endpoints allowed email-bomb + code brute-force	60s resend throttle + 5-attempt lockout	code
M4	Any staff could add/redeem unlimited points	adjustPoints / adminRedeem raised to owner-only	PASS
Infra	Hardcoded default admin password; missing env docs; timing-unsafe cron secret	ADMIN_PASSWORD required (no default); .env.example completed; timingSafeEqual	done

8/8 automated money & authorization tests pass (`npm test`), exercising the real routers against a live database. Screenshots below confirm every page renders correctly for each role after the changes.
